

Turn-key contracts

Those who do not wish to concern themselves with the detail can purchase a turn-key contract from TMS Engineering. We can look after every phase of the work; from project planning and negotiations with subcontractors to execution and final inspection. We naturally offer a full functional warranty, and we take care of any necessary training.

We can coordinate turn-key contracts in all the areas in which we are involved – dam construction, full and partial dam renovation, automation, installation of machinery, gates and sluices, intake equipment like Screens and Screen cleaners, conveyorsystems etc.

Accessories, service and consultancy

We supply a range of selected accessories, which are essential for the safety and function of a dam. These include safe sluice-gates-opening bars, fall protection systems, lubricants and dam sluice-gates seals.

TMS Engineering is your obvious partner when it comes to all forms of servicing. We can look after everything, from regular maintenance to modernization of dam sluices-gates and sluice-gate equipment, hydraulic equipment, inlet screens (trash racks), Screen (trash rack) cleaners and belt conveyors, control and regulation systems, communication, etc.

As consultants, we can help you with every aspect of dams and dam engineering – theoretical calculations, dimensioning, project planning and construction, as well as giving practical advice on operation and maintenance.

TMS Engineering is the specialist hydro engineering company and supplies products and systems to improve the operating reliability and the economic performance of hydro power stations, water intakes and dams.
